Ahmad Azzam Fuadie

Senior Biddable Media Specialist @ dentsu Indonesia

Four years running paid media across telco, banking, retail, marketplaces and apps. I also build the tracking, budget control and ad-tech references behind it.

4
SEA markets handled across campaign work

62x
peak app ROAS from a 7× baseline

10x+
retail ROAS floor on selected campaigns

50+
accounts covered by budget guardrail

Three parts, one story.

1. Scope

Platforms, markets, and what I own week to week across paid media, reporting, and ops.

2. Selected cases

Banking, telco, retail, travel, and search, each with the problem, what I did, and the result in context.

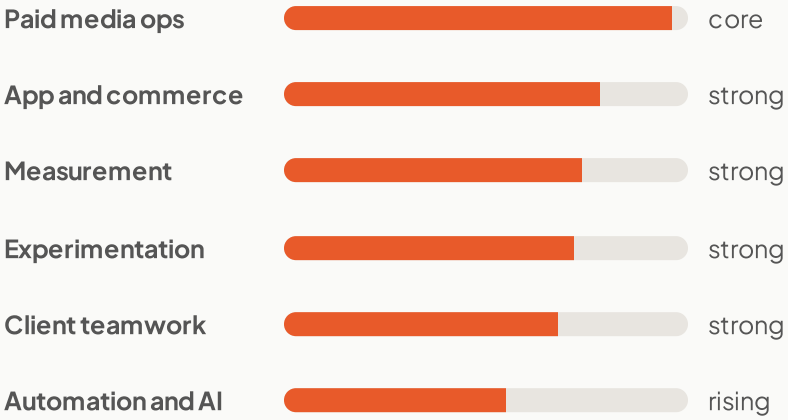

3. Systems

Adkivo, the Budget Guardrail, and certifications, the builder layer behind the media work.

What I handle day to day.

Campaign setup & QA

Structure, naming, tracking, platform requirements.

Pacing & optimization

Budget control, learning reads, creative and audience movement.

Measurement & reporting

GA4, AppsFlyer, Looker Studio, Supermetrics, clear stakeholder readouts.

Marketing ops systems

Sheets, Apps Script, CMS workflows, AI-assisted checks.

A weekly operating loop.

Setup
structure, tracking, QA

→

Monitor
pacing, learning, flags

→

Shift
budget, creative, audience

→

Report
readout + next move

Same loop across search, paid social, app and programmatic. Only the signals change.

Where the proof sits.

Banking

Fraud awareness + acquisition support.

50% CPR ↓ | 20% CVR ↑

Telco / app

Install and conversion efficiency.

+20% CVR

Travel leads

Lead gen with business pressure.

~30% CPL ↓

Retail cluster

One playbook across three brands.

10x floor | 100x+ peaks

SEM × SEO

Search built to run with SEO.

tandem

Systems

Adkivo + Budget Guardrail.

14 platforms | 50+ accounts

Fraud awareness that still had to deliver accounts.

Problem

A fraud-awareness message needed national scale, but the business still measured acquisition.

Role

Biddable media execution, optimization, and reporting, within a large team effort.

Setup → optimize → report: structure and tracking first, cost and quality movement second, stakeholder narrative third.

Cost movement, indexed

50%
cost-per-result reduction

20%
conversion efficiency lift

5
award programs recognized the campaign & team work

Installs were not the target. Quality was.

+20%

conversion rate increase

Efficiency signal from paid-social app work, read against in-app purchase quality, not install volume alone.

Meta Ads | App Campaigns | Optimization

Operating loop

1. **Monitor** daily pacing + learning
2. **Shift** budget to winners
3. **Read** in-app quality first

Leads the client could barely handle.

~30%

monthly CPL reduction

Demand grew enough that the client had to add customer-service capacity. Quality stayed the filter, not just cheaper forms.

CPL by month, indexed

Illustrative index of the reported 30% CPL reduction.

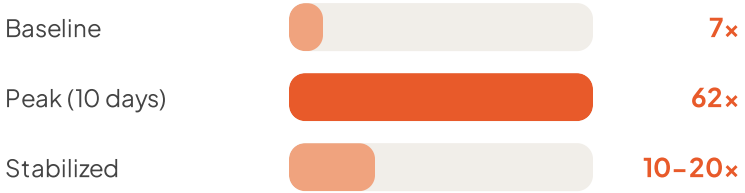

How it moved

Intent → Retarget → Inquiry

Lead quality + inquiry flow first, lower CPL second.

From 7x to 62x in ten days.

ROAS by phase

Selected app campaigns, reported figures, not account averages.

What changed

Budget moved to winning ad sets daily · creative refresh on fatigue signals · in-app purchase quality read via AppsFlyer before scaling.

Spend held near plan while efficiency compounded.

One playbook across three retail brands.

The playbook

Feed hygiene → margin-based bidding → creative rotation → promo-period scaling. Same loop, tuned per catalog.

Selected lower-funnel campaigns, reported figures.

Why it held

Product-set testing, audience refreshes, and budget reallocation ran continuously, peaks came from high-intent windows, the floor came from discipline.

Shopping · PMax · Meta · TikTok

Search built to run next to SEO.

SEO
owns content & rankings

↔

SEM
covers gaps & defends

Shared query data both ways: SEO informs keywords, SEM covers what SEO can't reach yet.

What I owned

Intent-based structure · keyword expansion · negatives and query mining · Quality Score and landing hygiene · brand defense.

Support role by design, traffic and efficiency signals shared with the SEO owner.

A reference hub I built for media buyers.

What it is

Public hub for ad-platform specs, creative guidelines, and paid-media references across 14 platforms, with an AI-assisted content workflow behind it.

14
platforms mapped

AI
content ops pilot

adkivo.my.id · live product.

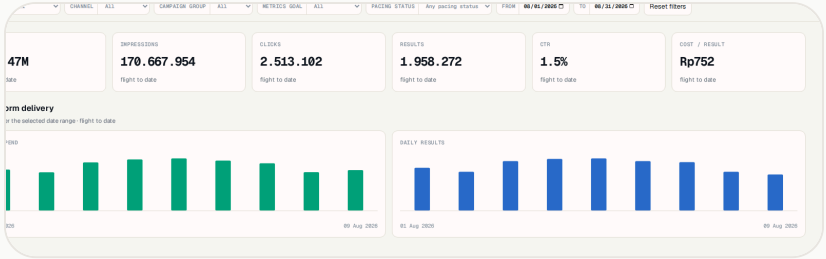

Inside

Structured spec database · compliance notes per platform · creative guideline summaries · publishing workflow with AI drafting and human review.

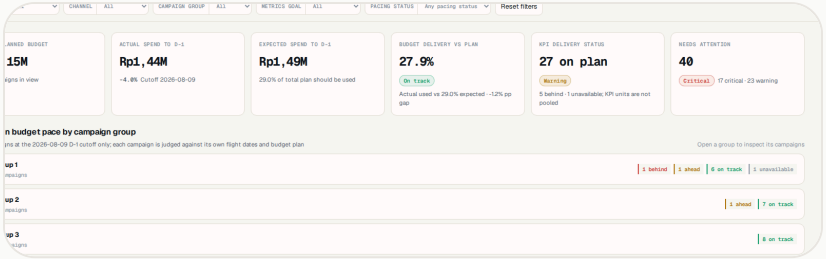

Built with Next.js, TypeScript and Supabase. Same builder habit behind my tracking and budget tooling.

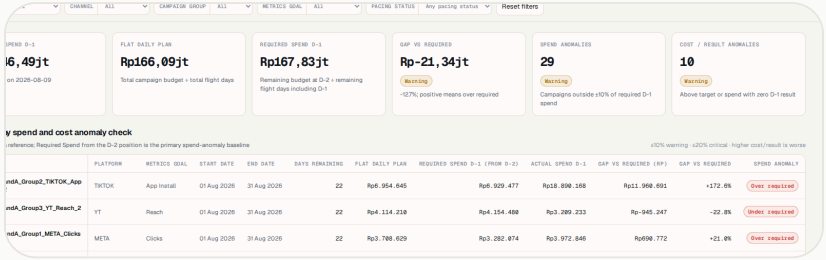

The D-1 console I run accounts on.

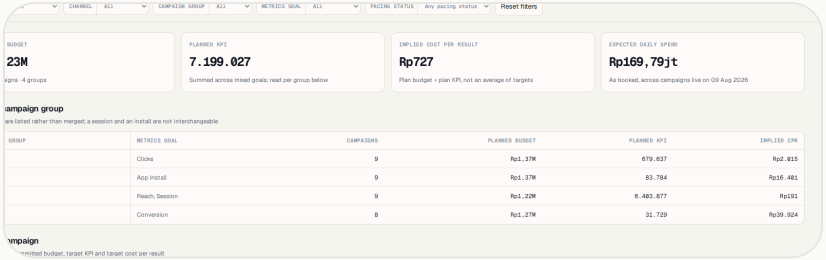

Trend: daily spend and results by platform.

Overview: pacing vs plan and watchlist.

Monitor: live flags and alerts.

Targets: KPI delivery vs goal.

Anonymized demo payload (Brand A, synthetic values). Layout, pacing logic and alert engine from the real console.

Budget risk, made controllable.

How it works

Input
dates + lifetime budget

→

Check
spend vs guardrail

→

Act
alert or pause

Apps Script plus Workspace sheets across 50+ accounts. Saves 10+ hours of manual checks weekly.

Why it exists

Lifetime budget controls don't behave the same across campaign types, and one-by-one rules are slow with limited logic. The guardrail watches all of them in one place.

Beyond big accounts.

Categories

Umroh & travel, skincare & fragrance, hijab & fashion, car rental, fresh meat & qurban, food catering, skin & wound clinic, professional services.

Work

Audit, paid social, landing review, WA lead flow, reporting, CRM and email basics.

Success lens

Lead quality, orders, demand handling, reporting clarity.

> Selected freelance results: 40× peak ROAS in sales periods, 10–20× on warm and cold campaigns, 2–3× lead growth month over month.

Certified where it counts.
